

Adding Row-level Security

Defining Security Roles

1. To define security roles, first, import data into Power BI Desktop
2. Then, from the Modeling tab, select **Manage roles**

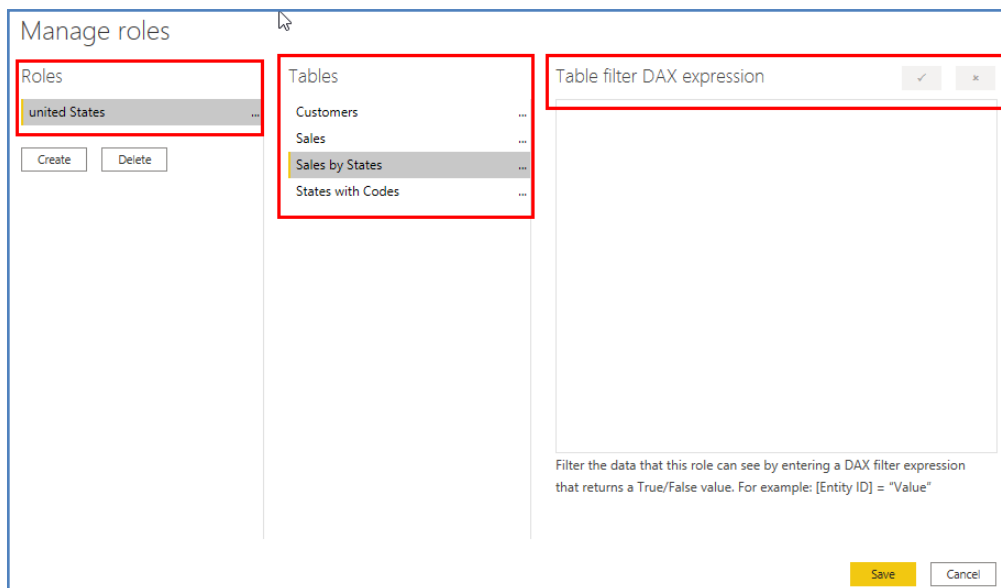

3. When the Manage roles window opens up, click on **Create** to create new roles

4. Here, under **Roles**, provide the name for the role

5. Under **Tables**, select the table to which you want to apply the DAX Rule

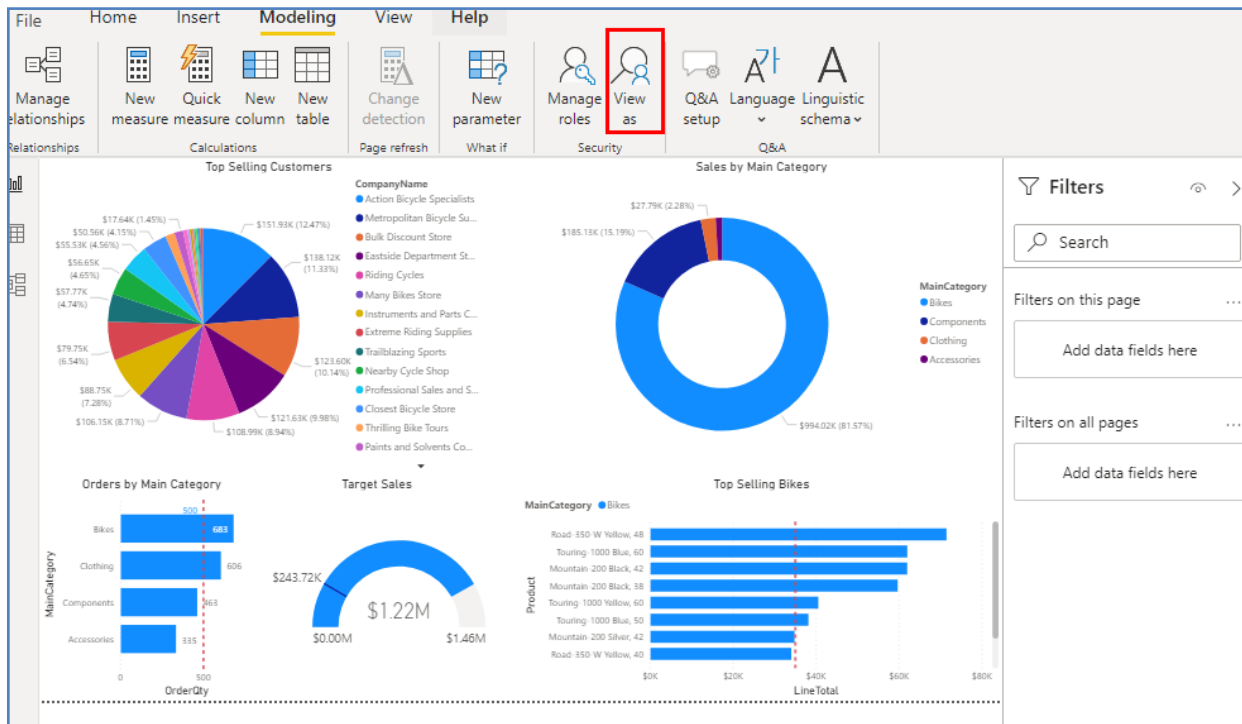

6. Next, under the **Table filter DAX expression**, enter the DAX expression

7. Once all these steps are performed, click on **Save**

Validating Roles in Power BI

1. To validate the roles, first, from the Modeling tab, click on **View as**

2. You can select the defined role and assign it to a given user

3. You can also add members or remove members in Power BI Service by typing the email ID of the user or security group
